INTRODUCTION

The Portfolio is a simple web-based application developed using HTML and CSS. The main purpose of this project is to showcase a candidate's skills, projects, and contact details in a clean, organized, and visually appealing single-page website. The application includes sections such as Home, About, Skills, Projects, and Contact, allowing a visitor to quickly understand the candidate's background and technical expertise. HTML is used to create the structure and content of each section, while CSS is used to design the layout, color scheme, spacing, and responsive behavior for different screen sizes. This project demonstrates how HTML and CSS can be combined to build a professional, easy-to-navigate personal website that effectively represents a candidate's skills and work online.

INPUT CODE

```
<!doctype html>
<html lang="en">

OUTPUT

Shaurya Venkta

Data Scientist • Full Stack Developer

Hi, I'm Shaurya — I build data-driven applications

I work at the intersection of signal processing (FFT), machine learning, and full-stack engineering to create practical, production-ready solutions.

[View Projects](#)[Get in touch](#)

About

Motivated BCA graduate with experience in data analysis, signal processing, and building full-stack applications. Comfortable with Python, JavaScript, and common web and data tools.

Skills

Data Science

Python, NumPy, Pandas, SciPy, scikit-learn, FFT/time-series analysis

Frontend

HTML, CSS, JavaScript, React, responsive design

Backend

Node.js, Express, REST APIs, MongoDB, deployment basics

Projects

FFT-based Signal Analyzer

Tool for frequency analysis and simple filtering of time-series data.

Real-time Chat App

Full-stack chat using WebSockets, with authentication and persistence.

Personal Portfolio

Simple responsive site showcasing projects and resume.

Contact

CONCLUSION

The Portfolio project successfully provides a simple and professional way to present a candidate's skills, projects, and contact information through a single, well-structured web page. The project uses HTML to create the structure and content of each section, and CSS to design the layout, colors, and responsive design for both desktop and mobile screens. It offers an easy and effective way to showcase one's work online without relying on third-party platforms. This project also helps in understanding the practical use of web technologies and how HTML and CSS work together to build a responsive, presentable, and functional personal website.
