INTRODUCTION

The Personal Portfolio Website is a modern front-end web application developed using semantic HTML and CSS, specifically leveraging CSS Grid layout techniques and keyframe animations. The primary objective of this project is to provide a clean, professional, and accessible personal space to showcase a developer's profile, technical skill sets, data-driven projects, and contact channels.

The website is structured into intuitive, focused sections including a sticky Navigation Bar, an animated Hero Section introducing core domains (signal processing, machine learning, and full-stack development) with call-to-action buttons, an About Me overview, a Skills matrix, a Featured Projects showcase, and an interactive Contact form with direct mailto integration.

HTML is utilized to create an organized document outline using semantic elements such as `<header>`, `<nav>`, `<main>`, `<section>`, and `<article>`, ensuring accessibility and clear separation of content. CSS Grid is implemented to achieve robust, multi-column card layouts for the skills and project showcases, while CSS keyframe animations (`@keyframes show`), transition effects, and card lift interactions (`transform: translateY`) deliver visual depth and polish. Accompanied by media queries for cross-device responsiveness, this project illustrates how modern CSS layout engines and lightweight animations can transform a standard curriculum vitae into an engaging, performant web presence.

INPUT CODE

```
<!doctype html>
<html lang="en">
  <head>
    <meta charset="utf-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1" />
    <title>Shaurya Venkta | Portfolio</title>
    <style>
      * {
        box-sizing: border-box;
      }

      body {
        margin: 0;
        font-family: Arial, sans-serif;
        color: #123;
        background: #f5fbfa;
      }

      header {
        padding: 20px 8%;
        background: #0b6b63;
        color: white;
      }

      nav {
        display: flex;
        justify-content: space-between;
        align-items: center;
      }

      nav a {
```

```
margin-left: 15px;

OUTPUT

CONCLUSION

The Personal Portfolio Website using CSS Grid & Animations project successfully delivers a cohesive, responsive, and visually dynamic platform for presenting professional qualifications and technical projects online. By employing HTML semantic elements, the project maintains a strict structural hierarchy across sections, improving content clarity, navigational ease, and overall web accessibility.

The styling architecture demonstrates the practical application of advanced CSS concepts: CSS Grid facilitates seamless alignment across card components, custom keyframe animations establish an engaging entry sequence, and subtle hover states offer responsive visual feedback without relying on heavy external libraries. Furthermore, responsive breakpoints guarantee that navigation and multi-column grids adapt fluidly from wide desktop monitors to mobile screens. Ultimately, this project highlights the power of pure HTML and CSS in building lightweight, fast-loading, and professionally styled personal portfolios, serving as a functional showcase of both technical capability and modern front-end design fundamentals.
