# INTRODUCTION

The Student Registration Form is a simple web-based application developed using HTML and CSS. The main purpose of this project is to collect a student's personal, academic, and contact details through a structured and user-friendly form. The application allows the user to enter information such as Registration ID, Name, Gender, Date of Birth, Email, Phone Number, College, Department, Course, Section, Semester, Address, and Resume upload. HTML is used to create the structure of the form, including input fields, radio buttons, dropdown menus, and a file upload option, while CSS is used to design the layout, spacing, colors, and interactive input styling for a clean and professional appearance. This project demonstrates how HTML and CSS can be combined to build an organized and functional data-entry form suitable for student registration systems.

# INPUT CODE

```

```

# OUTPUT

The screenshot displays a web browser window with a dark theme. The address bar shows the file path: C:/Users/SHAURYA%20VENKTA/Desktop/FFT\_SHAURYA/Student%20Reg%20Form.htm. The main content area features a light blue background with a white card titled "Student Registration Form". The form contains the following fields and controls:

- Registration ID:
- First Name:
- Last Name:
- Gender: ☐ Male ☐ Female ☐ Others
- Date of Birth:  
- Email:
- Phone Number:
- College:
- Department:
- Course:  
- Section:
- Semester:  
- Address:
- Resume:

At the bottom of the form card, there are two buttons: a blue "Register" button and a grey "Reset" button.

# CONCLUSION

The Student Registration Form project successfully provides a simple and user-friendly way to collect and organize a student's academic and personal details. The project uses HTML to create the structure of the form, including text fields, radio buttons, dropdowns, and file upload, and CSS to design the layout, spacing, and visual styling for a clean and professional look. It reduces the effort of manually collecting student information and ensures all required details are captured in a consistent format. This project also helps in understanding the practical use of HTML form elements and how HTML and CSS work together to build an interactive and well-structured data-entry web page.
